Professional:

Backend Developer with experience building scalable microservices using TypeScript, NestJS, Kafka, and Redis. Currently part of the Infrastructure team at Matrix Group (Mizrahi-Tefahot Bank), where I develop backend services and REST APIs for enterprise applications. Passionate about designing scalable systems, clean architecture, and delivering high-quality software solutions. I'm actively seeking a Software Developer opportunity

Skills:

Typescript
C#
Java
Python
NestJS
.NET
Jenkins
Playwright
Appium
Kafka
Bash
SQL
React
Docker
Redis

Languages:

Hebrew
English
Russian

Matrix – Backend Developer – Mizrahi Tafhote - 06/2026 - now

- Developed and maintained scalable backend microservices using NestJS and TypeScript.
- Designed and implemented BFF services using Kafka for asynchronous messaging and Redis for caching.
- Developed and maintained RESTful APIs, enhancing backend functionality and supporting enterprise-scale applications.

Matrix - Automation Team Lead - Mizrahi Tafhote - 08/2025 - 06/2026

- Led a team of 3 automation engineers for web, Api and mobile testing.
- Planned and reviewed automation tasks and technical solutions.

Matrix - Automation Developer - Mizrahi Tafhote - 02/2025 – 08/2025

- Built automated test infrastructure with TypeScript/Java using WebdriverIO and Playwright.
- Maintained and developed automated test pipelines using Docker.
- Developed and maintained automated tests for web, APIs, and mobile applications.

Matrix - Automation Developer Philips - 02/2024 - 02/2025

- Designed and built C# - based automated testing infrastructure.
- Maintained automated tests using SpecFlow and C# to support scalable CI/CD

Internship- HIT- Data Science - 11/2022 - 06/2023

- Developed data analysis solutions using Python, NumPy, and Matplotlib.

Education:

Holon Institute of Technology: 10/2020 - 07/2023 BSc computer science.

Projects:

WebTradeTracker- Built a full-stack trade tracking platform with a microservices-style architecture using a .NET backend and NestJS BFF. Implemented secure JWT authentication, stock management APIs, and a React frontend with Redux state management. Integrated Docker-based environments and structured logging for scalable development and testing workflows.

myControlApp – IDF division-wide scheduling management app built with Kotlin/Jetpack compose CI/CD pipeline implemented using GitHub actions with bash scripts and docker(GitHub).

Menu Optimaztion - College internship project in collaboration with an Italian company.(GitHub).

MyApartments — App that scrapes apartment listings from Yad2, stores the data in MongoDB, and presents it via a React UI and a FastApi backend, deployed using Docker Compose.(GitHub)

xParty – Built an interactive map using osmdroid opensource maps API & Firebase in Kotlin for event visualization (GitHub)
